Betwixt Christmas day and Shrove-sunday is nine weeks two days.

An Explanation of the several Columns of the *ALMANACK*.

In the first Columne is the dayes of the month. The second the dayes of the week. The third the Saints dayes with the beginning and ending of the Termes. The fourth is the sign and degree the moon is in at noon. The fifth is the hour and minute of high water at *London* Bridge according to the Moons middle motion. The sixth a blank columne. The seventh and eighth contain the dayes of the moneth and the dayes of the week for the Roman accompt, which differeth 10. dayes from the accompt used with us, for the first day of our moneth is the eleventh of theirs. In the ninth is the houre and minute of Sun rising and in the last columne is the hour and minute of Sun setting in the latitude of 52 degrees.

The beginning and ending of the four Termes with their Returnes for this yeere 1652.

Hilary Terme begins January 23. and ends Feruary 12.

To find the time of Full Sea in any of these places, adde the hours and minutes placed right against any of them, to the time of Full Sea at *London-Bridge* (which is noted in the fift column of my *Almanack*) and you have your desire.

Example.

I would know the time of Full Sea at *Milford*, the 8 of *January*. The time of Full sea at *London*, is at 9 and 24 min. to which add 4 and 30 min. the numbers found against *Milford*, and makes 13 and 54 min. from which I substract 12 hours, there remains 1 hour 54 min. *viz.* at 1 and 54 min. the next morning it is full sea at *Milford*; these hours are always counted from 12 at noon; do thus for any other place.

The cauſe of the Tides, and why they fall out every day later then other.

The natural cauſe of the Ebbing and Flowing of the Sea, is the Moon; and therefore the Tides do and muſt continually follow her motion. And the reaſon why that Tide or Full Sea, which happeneth this day at 12 a clock, the Moon being then full South, will fall out to morrow 48 min. later, *viz.* at 48 min. paſt 12 a clock; the reaſon is, becauſe in the place noted (ſuppoſe it at *Penſtruth*,) it is always Full Sea when the Moon comes full South; and although ſhe were full South this day at 12 a clock, yet to morrow before ſhe can come to that point, and get full South again, it wil be 48 min. paſt 12 a clock: and ſo, becauſe in that place it cannot be Full Sea till the Moon comes full South, it will neceſſarily follow, that it muſt be high water to morrow 18 min. later then it was to day; for the Moon every day comes again to the ſame place of the Heaven or point of the compaſs, noted (be it what place or point it will) always about 48 min. later then ſhe did the day before. I ſay, about 48 min. later, becauſe it is not always juſt 48 min. by reaſon of the Moons Epycicle, and Eccentrick Orb, whereby ſhe moves ſometimes ſwifter, ſometimes ſlower; ſo may happen ſom few min. ſooner or later, as her motion is ſlower or ſwifter.

Note, that at the Spring Tides which happen from 3 days before, till three days after the Full and change of the Moon, the waters flow ſom what ſooner, riſe always higher, then at any other times.

Mark alſo, that contrary Winds, Land-floods, or the Moons South latitude, may make the Tide to fall out ſometimes later; and the Moons North latitude, or winds blowing with the Tide, may bring it ſom what ſooner then theſe Rules direct. Therefore you muſt allow for theſe.

The

The Spring Quarter.

BEgins *when the Sun enter into the first minut of* Aries, *which in our Meridian of* Todinton *will be this year 1652. upon Tuesday the 9 of* March 44 *minuts past 7 at night*

Summer Quarter.

Begins when the Sun enters into the tropicall signe Cancer, *which will be upon Thursday the 10 of* June, 32 *minuts past* 10 *at night.*

Autumn Quarter.

Begins when the Sun enters into Libra, *which will be upon Sunday, the* 12 *of* September, 38 *minuts past* 1 *in the afternoon.*

Winter Quarter.

Begins when the Sun enters into Capricorn, *which will be upon Saturday, the* 11 *of* December, 21 *minuts past* 1 *in the morning.*

How to judge of the weather by the Sun.

IF the Sun setteth red in the evening, or the sky red in the evening, sheweth the next day to be fair. If the Sun shine clear and bright at rising, or if at his rising there be a circle about him which vanisheth away equally; if the circle about him be clear and of no continuance, or if he rise and set clear without clouds, it is fair weather.

But if the Sun rise fiery red, or if at his rising he cast his beams afar off amongst the clouds, or if at his rising he be overcast with a thick mist, or thin cloud, if the Sun-beams be spotted green, pale, or black, gathered to a cloud, if at his setting there appear a thick mist, or if he set behind a great black cloud, rain followeth; Blackness in the Sun or Moon betoketh rain; all these are signes of foul weather.

If

If at his rising the beams seem red, or compassed with red clouds, great winds. If there be many circles about the Sun, if the circles be red and broken, the redder, the more wind; but if thick and dark, it is cold winds or snow.

How to judge of the weather by the Moon.

IF the Moon at her change, quarters or full, be in hot and dry signs, as *Aries, Leo*, & *Sagitarius*, it is fair weather in Winter; in Summer heat. If in earthy, cold, dry signes, as *Taurus, Virgo*, and *Capricorn*, in Winter it is cold, frost and snow do follow; but in Summer temperate: If in airy and windy signs, as *Gemini, Libra*, or *Aquarius*, it is much wind: if in watry, cold, moist signes, as *Cancer, Scorpio*, or *Pisces*, in Winter wet; in Summer pleasant weather. If the Moon appear black, pale, or thick, it threatneth rain: If upon the third day after her change, or three days before her full, or in the midst of her quarter she be bright, and nothing about her, the ends direct upwards, fair, but inclining wind. When the Moon is four days old, if the tops of her horns be blunt, rain; if sharp and pricking upwards, wind. If the fourth day after her change she have a red circle about her, wind and rain. If [illegible] circle about her, fair weather. If [illegible] full Moon seem pure, fair weather, if red, [illegible] rain: if the appear not before the [illegible] wind blowing, winter [illegible] the Moon be increasing, and the upper horn black when she riseth, there will be rain after the full: if the lower be so, there will be rain before the full: if she appear in the middle, then look for rain at the full of the Moon.

Of

Of the Eclipses of the Sun and moon, this year 1652.

Four times this year the Luminaries will be eclipsed: twice the Sun, and as often the Moon. Whereof the first of the Sun, and both of the Moon, will be seen here in *England*; but the last of the Sun in parts far remote.

The first Eclipse is of the Moon on *Monday* the 15 of *March*, early in the morning:

The beginning 13 minutes past 2.
The middle 4 minutes past 4. } *in the morning.*
The end 55 minutes past 5.
The whole duration is 3 hours 42 minutes.
The Digits eclipsed are 9 Digits 57 minutes.

North

E

South.

THe second Eclipse of the light Globe of the Sunn is caused by the direct interpontion of the Moons body between the Sunn and our sight upon the 29 day of *March*, in the forenoon, both the Luminaries being in conjunction near the North node, in the 19 degree, 26 minuts of *Aries*, the Semediameter of the Suns body, 15 minuts, 12 seconds; and the Semediameter of the *Moons* body 17 minuts 1 second, the altitude of the Luminaries 37 degrees 26 minuts, the latitude of the Moon at the beginning of the Eclipse, is 8 minuts 48 seconds South; and at the end 3 minuts 28 seconds North.

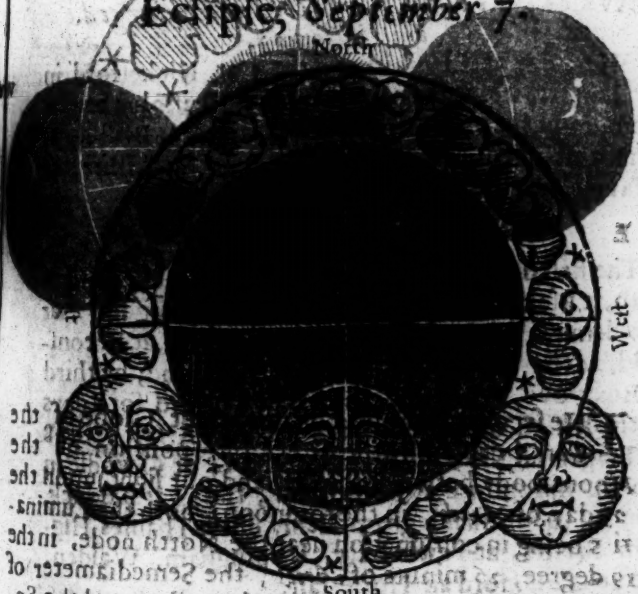
The beginning 33 minuts past 8
The middle 47 minuts past 9 } *in the forenoon.*
The end 1 minut past 11

The

The whole duration of time from the beginning to the end, is 2 hours 28 minuts.

The parts or Digits Eclipsed are 11 Digits 53 minuts: So that the Sun will be almost wholly darkned; but for the better demonstration beheld the Type.

A Type of the Moons Eclipse, September 7.



THe third Eclipse is of the moon (darkned by th e shadow of the earth) upon the 7 day of September the Moon rising Eclipsed near the East point of the horizon; therefore we shall not see the beginning of this Eclipse, because the Moon riseth but 24 minuts before the middle of the Eclipse; so that the middle and end of the same will be visible to us in *England*, if the air be clear.

The

The beginning 52 minuts past 4 } *at night.*
The middle 34 minuts past 6 }
The end 17 minuts past 8.
The whole duration is 3 hours 25 minuts, the parts darkned of the Moons body are 9 digits 57 minuts.
